

## Chapter Two

### A Question of Values

We begin with what is necessary, what is most important for all concerned. For that which is of common concern to all is therefore, the most valuable. A simple observation one would think and yet so easily overlooked by so many organisations within this current era. The very survival of life forms is dependent upon fire, water, earth and air. These elements create and nurture the life force, the wellbeing, the comfort and the complete wholeness of the living life forms.

Let us commence then with these elements. One would think that the supply of those elements, (fire, water, earth, air) would be of utmost importance and the first in any list of values and yet this is not what we find. The provision of food for any living form is its first priority. The elements that it needs to survive must be there or it simply does not survive. It is not different then for the human species, proud as it has become, assuming that it is beyond such basic elements. It has ceased and continues to cease, providing the basic elements needed for its' own survival. If food then is of first importance in survival, would it not be seen to be that which is the most readily obtainable in any species?

One of the guiding books of the planet refers to a parable of seeds that fall on rocky ground and do not survive. Much seed then of the human species seems to be falling on rocky ground. There is less and less fertile ground being provided for the perpetuation and care of the species. Wonder then, why the species is gradually becoming infertile, not only physically but also emotionally and psychologically. <sup>1</sup>

Reluctant to perpetuate its own, hesitant about nurturing its offspring, is has become more inclined to dispense with the perpetuation of itself. Indeed, the human species is looking at its own demise. In its arrogance and naivety it does not realise that it can be so easily dispensed with in terms of the universal scheme of things. <sup>2</sup>

---

<sup>1</sup> Reference to procreation. Also productivity and innovation particularly in response to problems needing solutions.

<sup>2</sup> 2007 insert: 'dispensed with *on this planetary world...* in terms of the universal scheme'. Refers to how easily we could end the human species on this planet, (but not universally).

Yet the species as it exists serves a most important purpose: as the intermediary between many energies and understandings, beyond where it is now and the physical environment in which it finds itself; as the meeting point between heaven and the earth; the human species fills a vital, (in the true meaning of the word) role. Its perpetuation then is of interest to more than itself, for the Earth must depend on the human species for its own evolution as the 'heavenly energies' seek to find their expression within the whole.

In becoming conscious of itself, the human species realises the possibility of its own detriment. Its first value, however primitive this may be perceived, must be for its own [care and its own perpetuation](#). [Value 1]

Look then to the scale of priorities in all societies and we see that the four elements - water, air, earth and fire - are costly and not made available to all. The health of the species is important to all. One finds instead that entertainment is more easily obtainable and less expensive in all senses of the word, than the very elements necessary for the survival of the species. A strange detour indeed . . . However, it leads us to the second of values.

The human species, in its seeking of entertainment, in its reaching outside of itself, albeit to the earth or heavens, weaves for itself a consciousness, a need and a value which once again is vital to its role within the universe; that of the ability to take itself [beyond where it is](#). [Value 2]

This can be seen in many aspects of any society: in ritual and ceremony, festivity, entertainment, creativity, education, intellectual exploration, technology - any aspect of human beings extending beyond where they are, is confirmation of its role. If this is its second value in order of priority, the very creativity, the seeking, the exploring, the wondering and the delight - the 'original innocence' of the species, is of vital importance in its role. For were it not to reach beyond itself, it would not know there is a heaven let alone strive to reach it. In reaching for the heavens it stretches beyond where it is and becomes the 'rod which attracts the light.'<sup>3</sup>

---

<sup>3</sup> The only reference to this I have found in Esoterica is in the work of Master DK: Alice A Bailey books, Lucis Trust. Experience of Initiation is involved here: The magnetic dance between the human and the Soul.

This visual image of attracting such condensed energy as lightning leads us to the third value, [energy](#). [Value 3] Energy at present is being seen as a means to provide for the first two values or needs: the survival of the species in heat, production of food, the collection and redistribution of water and the tilling of the earth. The purification of the air and of water is an area into which the species will venture very rapidly. <sup>4</sup>

Energy is to be used for the survival first and then for the diversification of the human being beyond where it is. The use of energy can be seen in entertainment, in industry, in education, in movement (mobility), in wonderment, in science, in discovery . . . yet energy has a value of its own. Having been seen as *a means to an end*, human societies can now move into a phase of discovering that energy has an existence of its own. In the past it has been seen as something to be harnessed or generated: to be used, exploited, manipulated, developed and finally perhaps - discovered.

It is on the final threshold of *discovery of energy* that humans move into a different understanding. The mental leap of that consciousness takes them into the solar family and the solar village.

Energy exists. Energy is! [Energy](#) has a mind of its own. It is spirited. Energy takes on its own individual character as it diversifies through the universe. Just as you will find sheet lightning and forked lightning seeking its earth, so you will find many forms of energy in existence throughout your solar system and the universe beyond.<sup>5</sup>

It is the ability to understand that these energies exist - that they have their own characteristics, that they have their own destination, their own manners of moving, their own natures and expressions - that will set humanity free.

This understanding then, is the means to open space/time travel. For it is not the ability to produce its own energy, that will enable the human species to travel through space. Rather it is the ability to understand the 'inter' and 'intra' energies that exist in all forms throughout the planet, around individual planets and in the spaces between those planets. It is time for the species to discover the meeting of gridlines, of the forces, the inter-twining of many different energy forms across this universe of which it is a part.

---

<sup>4</sup> 2007 Indeed - this has become so.

<sup>5</sup> 2007 This is definitely advancing in the scientific community now.

The ability to 'tune into' any one of those energies is the means by which free travel can be discovered, acquired, achieved, explored, and most of all - enjoyed. It is the freedom of knowing that one is not exploiting, using or abusing, but rather, riding *what is*. The difference between a motorboat and a surfboard, is indeed, a wonder upon which to ponder.<sup>6</sup>

The fourth value combines a number of different areas of experience within the human species. That, which is beyond the planet Earth experience at this stage, combines a number of different aspects into one concept. As such there is no word yet, term or expression within the vocabulary.

Think about the rite of ponderance, life and death, change, metamorphosis, healing, will –to-good, the dance of negative and positive energies. We have here an area of the human being, often referred to as [growth](#). [Value 4] This can be described as 'the movement from one phase or state of being to another'. The difficulty is that if one cannot visualise what one is moving to, one cannot see that it is movement.

Death can be seen as a doorway or gateway . . . as to what is beyond is left to the imagination. One cannot move backwards in growth. A man of fifty cannot return to being twenty in order to understand what he was at twenty. He can only search through the cellular memory he has retained, adding to it his imagination and his present understanding. He cannot return to that *state* and tell the twenty year old what he will be at fifty - unless he steps outside, the [three dimensional time/space matrix](#).<sup>7</sup>

How then can somebody move from death back to life and recall or record, what is ahead? The only way that this can be achieved is for one to have intimate working understanding of the very construction of the cellular energy. <sup>8</sup>

Let us consider our formula:  $NF + 1$  [Where  $NF = \text{Natural Forces}$ ]. <sup>9</sup>

---

<sup>6</sup> Something to consider and think about with our current dilemmas re energy supply.

<sup>7</sup> 2007 Much has been discovered now. Fourth dimensional meditative and trance states such as hypnosis enable us to experience a different state of being directly with our senses. Post Traumatic Stress Disorder is retention of that state carried through linear time. Virtual worlds and technologies ... and so on.

<sup>8</sup> Or experiences a different state of being outside 3<sup>rd</sup> dimension ... as in NDE's.

<sup>9</sup>  $NF$  refers to [Natural Force](#) which is a cosmic term. The original co-authors of this document now, in 2007, occasionally refer to this as [Natural Field](#) to assist our growing comprehension. Although they still prefer to use what to them is the correct term: i.e.  $NF$  means [Natural Force](#).

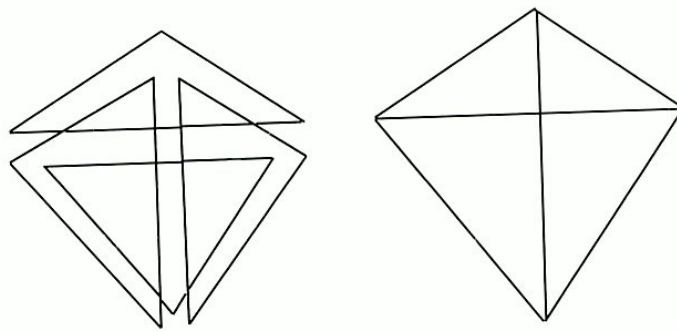

If a Genetic Engineer takes the natural forces that are involved in cellular activity - in the coded instruction of the cell - and adds one limit, one unit, one equivalent pattern, it will bring about change. To participate in this process without destroying the original, yet allowing it to enhance itself through its own consciousness, grow and change in the freedom of its own intimate design, is to move towards understanding of the mystery of **growth**.

Change then is to be valued, for it is in many ways an intricate summary, an interweaving, an intermeshing and a sum total of all four of the above.

Here we have the four values, the four cornerstones, the cube upon which rests humanity. Without these four dimensions, the human species is unfulfilled and incomplete.

#### Summary of Galactical values:

1. The care and perpetuation of the species
2. The ability to create beyond what is
3. Energy
4. Growth

## Notes for Chapter Two: Values

The easiest way to understand how these four values fit together is to think holographically. At the time of the original channelling of this document, we had begun to be trained to think [spherically](#).

Now, in 2007, the ability to think and visualise in holographic parameters and dimensions is far more advanced. Rather than prioritising in sequential order, the four values described in this chapter, but rather to see each as a component or aspect of one whole, then it will make a great deal more sense.

The human societies at present on our planetary world range from over indulgence in the creative that consistently denies what is required for basic survival. This can be *within* one particular society, nation or culture, as well as ranging from country/nation to nation.

Once we can conceptualise a whole planetary world, thinking as a sphere, then we can see that to provide and nurture the 'basics' for survival for all life forms supports the foundation and fabric of our world which in turn stimulates and nurtures, encourages and expands the others.

All four are intertwined: the sustainability of life forms, of races, of species, - or even of our own small family units – depends upon them. There is an implied wholeness and fulfilment of being that may emerge from a healthy balance and dynamic harmony between all four values.

The notion of 'balance' has been useful in introducing us to a variety of factors to be considered. What we seem to have here, are the essential ingredients of the sustainability and sustenance of [life](#) itself.

This chapter has been found to be useful to many people over the years since I first started circulating it in 1989. Biologists, chemists, physicists, environmental scientists, botanists, nutritionists, medicos, healers, gardeners, town planners, social reformers and educators are amongst those who have found the four Galactic Values to be ... of value!

One last note here: over the years of channelling ShaVrill, they often referred to this Chapter and the Galactic Values. They have confirmed that we , the fourth Kingdom in nature, are in danger of extinction if we ignore what is necessary for our survival. Since all four Values are required, we have much to consider.

They have also stated publicly and with emphasis, that our human species is not welcome, nor shall we be recognised as welcome, in the Galactical Federation as intelligent and conscious participating members until

we have acknowledged the four basic Galactic Values and demonstrated our understanding and application through open nurturing and the upholding of these. Common sense indeed!

Now, as I write this our planetary world is in the process of [adjusting to this Galaxy's Central Core](#). This occurs over a period of a year. The entire solar village is involved. The alignments occur through [Pluto](#) (our Solar System's most dense containment of matter) lining up with the Core exactly on 29<sup>th</sup> December 2006, 17<sup>th</sup> July 2007 and 28<sup>th</sup> October 2007. [Jupiter](#), our regal planet of large mass and the greatest gravitational impact, aligns with the Central core on 4<sup>th</sup> December, 2007.

It seems to me that we are definitely in an expanding experience of adjustment to these Galactic Values. What does NOT align with these Galactic Values during this period of adjustment will most likely be destroyed, dissolved or consciously discarded. Human consciousness expands following observation and contemplation of the indications and evidence of what is no longer appropriate AND when discoveries and new horizons, visions and comprehension encourage us to consider new possibilities. That is how we humans - at this stage of evolution - tend to function. [Jupiter](#) is the planet that expands our consciousness.

Astrologically, the approaching intensive cycle of Pluto in Capricorn indicates a phase of transformation – of our civilisations, our societies and the status quo. This begins in 2008, *following* this expansive year of 2007.

We may well have a bundle of (+1)'s to add and integrate into our lifestyles.
